

REPORT

A webinar was organised by Department of Mathematics, Pattamundai College, Pattamundai on 21st April 2022 on the topic "**Lattice and Algebraic System**". Dr Prayag Prasad Mishra, Professor of Mathematics, Silicon Institute of Technology, Bhubaneswar who graced the webinar with his analytical thinking. We were able to get the beautiful glimpses of the students of our Department in this webinar. Sri Arabinda Pandab, Head of the Department gave a key note address of the topic. Principal Prof Prabhakar Rout welcomed the guest and participants of different colleges of our state through web. The webinar was ended with a vote of thanks by Dr Nirmal Kumar Sahoo, another faculty member.

A
Webinar on
"Lattice and Algebraic System"
Organized by
Department of Mathematics,
Pattamundai College, Pattamundai
On
21st April 2022.
Submitted by: Dr. Prayag Prasad Mishra

Partial order relation

- A binary relation R defined on a set A is called a partial order relation if it is Reflexive, Anti-symmetric and Transitive.

Ex. The relation divides in the set of Natural numbers.

Partial order set

- A set in which a partial order relation is defined is called a partial order set.

Ex. Power set of a set under the relation subset.

Hasse-diagram

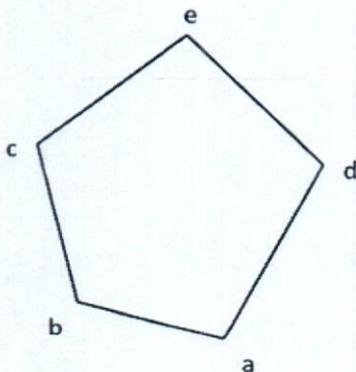

- Every poset can be represented in the form of a diagram called Hasse-diagram.

Ex. Let $A = \{a, b, c, d, e\}$ be a set.

Let $R = \{(a, a), (b, b), (c, c), (d, d), (e, e), (a, b), (a, c),$
 $(b, c), (c, e), (b, e), (a, d), (a, e)\}$

Clearly R is a partial order relation defined on A .

Hasse-diagram

Lattice

- A poset is called a lattice if every two elements of the poset have a unique Lub(Least upper bound) and unique Glb(Greatest lower bound).

Algebraic system

- A set along with one or two binary operations defined on it is called an Algebraic system.
- Example: Set of integers under addition.
- Every Lattice can be defined by an Algebraic system and vice versa.

Cont.

- The algebraic system defined by a lattice is expressed with two binary operations called Lub and Glb. Also they are named as sum and meet operations respectively.

Examples

The Algebraic system defined by a lattice (A, subset) with $A = \{a,b,c\}$ is $(A, \text{Join, Meet})$. Where join operation means union and meet operation means intersection.
