Madam/Sir,

On receiving complaints from different colleges, it is realised that some of the colleges are forwarding/sending mails to the old mail id of CoE, i.e., coe.utkal@gmail.com (which now does not function by the undersigned) instead of the latest mail id coe@utkaluniversity.ac.in . It is also a matter of regret for the ignorance of the colleges about the new mail id of the CoE, as all the communications are now being made through the new mail, i.e. coe@utkaluniversity.ac.in This has also been communicated previously to all the Principals.

Madam/Sir,

Principals of different colleges have expressed their concern on the deficit of examination fund to meet the expenditure on the ensuing +3 5th semester U.G. examination, 2021. It is clarified that in case of the deficit of examination fees received from current year, the Principals may spend the previous unspent balance available in the College Examination Fund or fees collected under centre charge previously.

Proposals have been initiated for increase in students' examination fees or compensating the colleges in meeting the aforesaid expenditure.

A draft brief synopsis of the Lecture

As a multidisciplinary construct, several practitioners, as well as intellectuals have been, from time to time, engaged in (re)defining the construct of 'development' at multiple levels – micro, meso and macro – because of its worldwide acceptance. To put it in simple terms, 'development' basically refers to the positive changes in various aspects of human society. However, it is not as simple as it appears. As Thomas (2004) argues, development is considered as 'contested... complex, and ambiguous'. The construct of development means different things at different times, in different places, and by different people in different professions and organizations (Chambers 2004). In fact, the vagueness of the construct of 'development', coupled with its increasing significance in regional, national and international levels, has led to a large socioeconomic and sociopolitical scuffle for influence over our future, which has ultimately forced the policymakers, development practitioners, and nonetheless, the academicians to (re)think and to (re)define its intellectual history from time to time while (re)structuring the journey of 'development'.

Development, in all its historical and contemporary connotations, has emerged as a powerful discourse, which has been especially shaping the social, economic and political landscapes of the underdeveloped as well as the developing countries across the globe. Often considered as a powerful construct, the power of 'development' has been consistently empowering the rich or developed countries in (re)structuring their dominance over the poor or developing or underdeveloped countries of the world. In this context, while engaging with development, there are several questions that pop up to one's

mind that include: What is development? Is it an abstract construct? Or, is it an empirical construct? What are the characteristic features of development? What are the goals of development? What are the objectives of development? Is it a mere panacea for problems confronted by several communities as well as countries in the world? What are the themes of development studies? Or, what is the subject-matter of development studies? And, last but not the least, why is it so significant in academic discussions? Therefore, it is indispensable on the part of a reader to understand the nuances of 'development' while engaging with this metamorphic discourse in line with the abovementioned questions, which will certainly shape one's own intellectual thirstiness of development.

Sumner and Tribe (2008) have fundamentally outlined three discernable connotations of the idea of development: (a) development as a process of structural societal transformation that involves changes to socioeconomic structures including ownership, organization of production, technology, institutional structure and law; (b) development as a medium-term outcome of desirable targets that concerns with 'performance indicators'-goals or outcomes that can be measured and compared with targets; and (c) development as a dominant discourse of western modernity, which is based on the western ethnocentric notions of development upon the third world that has emerged as a reaction to the deliberate efforts at progress made in the name of development since World War II (Sumner and Tribe 2008).

That apart, the notion of development especially during the era of decolonization has brought about widespread changes in socioeconomic and political structures of the human society across the globe. The phase of development that has emerged soon after the end of World War II began to adopt Western/European model of development. In other words, the newly decolonized countries that have emerged soon after World War II started to depend upon the technologies of the West. Thus, the adoption of the Western model across the newly established decolonized countries in the post-World War II era underpins what Philip McMichael (2000) calls 'the development

project'. The development project of Philip McMichael (2000) provides a comprehensive view about the concept of development during postwar period. This alternative project of development as summarized by McMichael was understood as: (a) an organizing concept to provide universal meaning; (b) a national framework for economic growth; (c) an international framework of aid binding the developing world to the developed world; (d) a growth strategy favouring industrialization; (e) an agrarian reform strategy encouraging agro-industrialization; and (f) central state initiatives to stimulate and manage investment and mobilize multi-class political coalitions into a development alliance supporting industrial growth' (Islam 2013).

Development is also treated as multidimensional in nature. According to Torado and Smith (2012), 'development must therefore be conceived as a multidimensional process involving major changes in social structures, popular attitudes, and national institutions, as well as the acceleration of economic growth, the reduction of inequality, and the eradication of poverty. Development, in its essence, must represent the whole gamut of change by which an entire social system, tuned to the diverse basic needs and evolving aspirations of individuals and social groups within that system, moves away from a condition of life widely perceived as unsatisfactory toward a situation or condition of life regarded as materially and spiritually better'. They have formulated three core values of development: sustenance, self-esteem, and freedom from servitude. First, sustenance or the ability to meet basic needs refers to the basic goods and services, such as food, clothing, and shelter that are necessary to sustain an average human being at the bare minimum level of living. Second, self-esteem or to be a person refers to the feeling of worthiness that a society enjoys when its social, political, and economic systems and institutions promote human values such as respect, dignity, integrity, and self-determination. Third, freedom from servitude or to be able to choose refers to a situation in which a society has at its disposal a variety of alternatives from

which to satisfy its wants and individuals enjoy real choices according to their preferences.

In addition, Thomas (2000) in 'Meanings, and Views of Development' defines development in terms of three major sense: (a) development as vision sensing the constitution of a desirable society; (b) development as a historical process sensing the transformation of human societies over a period of time; and (c) development as action or deliberate efforts sensing the role of various agencies including governments, organizations and movements aiming towards improvement. It is argued that development appears no longer to be mainly about the transformation of the economic and social basis of societies, and is now often thought of in terms of dealing with problems rather than searching for grand alternatives. Development has always been an ambiguous idea, on the one hand being virtually synonymous with progress and on the other referring to intentional efforts to ameliorate the distorted faults or progress (Cowen and Shenton 1996; Thomas 2000). Development for Chambers (1997) means good change that implies 'a vision of a desirable society, something to aim at, a state of being with certain positive attributes which can be measured so that we can talk of more or less development' and change implies 'a process which may entail disruption of established patterns of living' (Thomas 2000).

Another significant element while defining development is the terminologies used for denoting the series of countries especially belonging to Africa, Asia, Latin America and the Caribbean while undertaking development. In fact, it is significant on the part of a learner to be conceptually clear while understanding the poor as well as the rich countries of the world. In the development literature, there is no uniform/single category in denoting these countries. Development scholars, from time to time, have (re)developed several conceptual categories in order to understand and analyze these countries. Thus, the frequently used terminologies in development literature by the scholars as well as the practitioners of development are the underdeveloped countries, developing countries, developed countries, the First World, the Second World,

the Third World, the South, and the North. These are the terminologies that have been frequently used, not only in this book, but in almost all books relating to development studies.

Broadly, the term 'underdeveloped country' is assigned to a country that is less developed economically than most others, with little industry and little money spent on education, health care, etc. The term 'developing country' is assigned to a country that is referred to low- and middle-income country in which most people have a lower standard of living with access to fewer goods and services than do most people in high-income countries. The term 'developed country' is assigned to a country, which is industrialized in nature and has a highly developed economy, strong political system, and advanced technological infrastructure in comparison to the underdeveloped or developing countries. The term 'First World' refers to so called developed, capitalist, industrial countries, roughly, a bloc of countries aligned with the United States after World War II, with more or less common political and economic interests: North America, Western Europe, Japan and Australia. The term 'Second World' refers to the former communist-socialist, industrial states, (formerly the Eastern bloc, the territory and sphere of influence of the Union of Soviet Socialist Republic) today: Russia, Eastern Europe (e.g., Poland) and some of the Turk States (e.g., Kazakhstan) as well as China. The term 'Third World' refers to all the countries especially the developing countries of Africa, Asia and Latin America. The Third World countries have been classified by various indices: their political rights and civil liberties, the gross national income (GNI) and poverty of countries, the human development index (HDI) of countries, and the freedom of information within a country. The term 'Third World' has been initially used by Alfred Sauvy in an article published in 1952. For Sauvy and others, the term Third World is referred not only to the then decolonized countries but also to the economically weak countries of the world. The term was used to mean two separate, yet linked, senses: poor economic development position; and relatively unimportant place in international politics.

Developmentally, the term Third World sought to capture the economically weak and underdeveloped postcolonial countries in comparison to the rich countries of the first world. The term 'South' has been introduced by Willy Brandt in 1980 while reflecting on the conditions of poverty, lack of development and low status of the countries belong to the Third World. Thus, South served to highlight the unjust global economic order. The term South broadly refers to the countries belong to Latin America and Caribbean, Asia, and Africa. The term 'North' is basically referred to the developed countries of North America and West Europe. In development literature, the North-South dichotomy is often debated. It is viewed that the South is rich in resources whereas the North is rich in technology.

A systematic and scientific understanding of the invention of development dates back to the Enlightenment era, which is often considered as a powerful intellectual and cultural movement that has vigorously promoted the idea of progress, the significant revolutions – scientific, industrial and French – that have produced material and ideological augmentations, and post-World War II – more aptly, after 1945 – the development discourse that has invigorated the 'development thinking' in order to address the pressing problems and issues of the then newly decolonized countries. Thus, it is rightly claimed that the foundation of development was laid during the age of Enlightenment – the harbinger of progress – intensified by three mega revolutions – precursors of the spread of science and technology and the development of rational ideas – and finally, culminated during post-World War II – the War that gradually put to end the colonization and started to put formally the foundation of the study of development of underdevelopment of the newly decolonized countries. Therefore, the current lecture has made a critical attempt in understanding the trajectory of development studies through two major sections: development studies during Enlightenment era; and development studies during post-World War II. Needless to mention, such an attempt not only necessarily necessitates a systematic scrutiny, but also

systematically sounds and simplifies the journey of the idea of development. Thus, the proposed lecture attempts to unearth the innovative trajectory including fascinating features of idea of development in each stage of its development. In other words, the dominant objective of this lecture is especially to outline the intellectual history of 'development' which has gained enough popularity soon after the World War II.
