**Green Chemistry**

*"We can't solve problems by using the same kind of thinking we used to create them." - Albert Einstein (1879-1955)*

The reduction or elimination of the cost or generation of hazardous substances in the design, manufacture and application of chemical products.

*Green Chemistry: reducing waste and increasing responsibility to the environment, the public and ourselves.*

The term Green Chemistry is defined as "The invention, design and application of chemical products and processes to reduce or to eliminate the use and generation of hazardous substances".

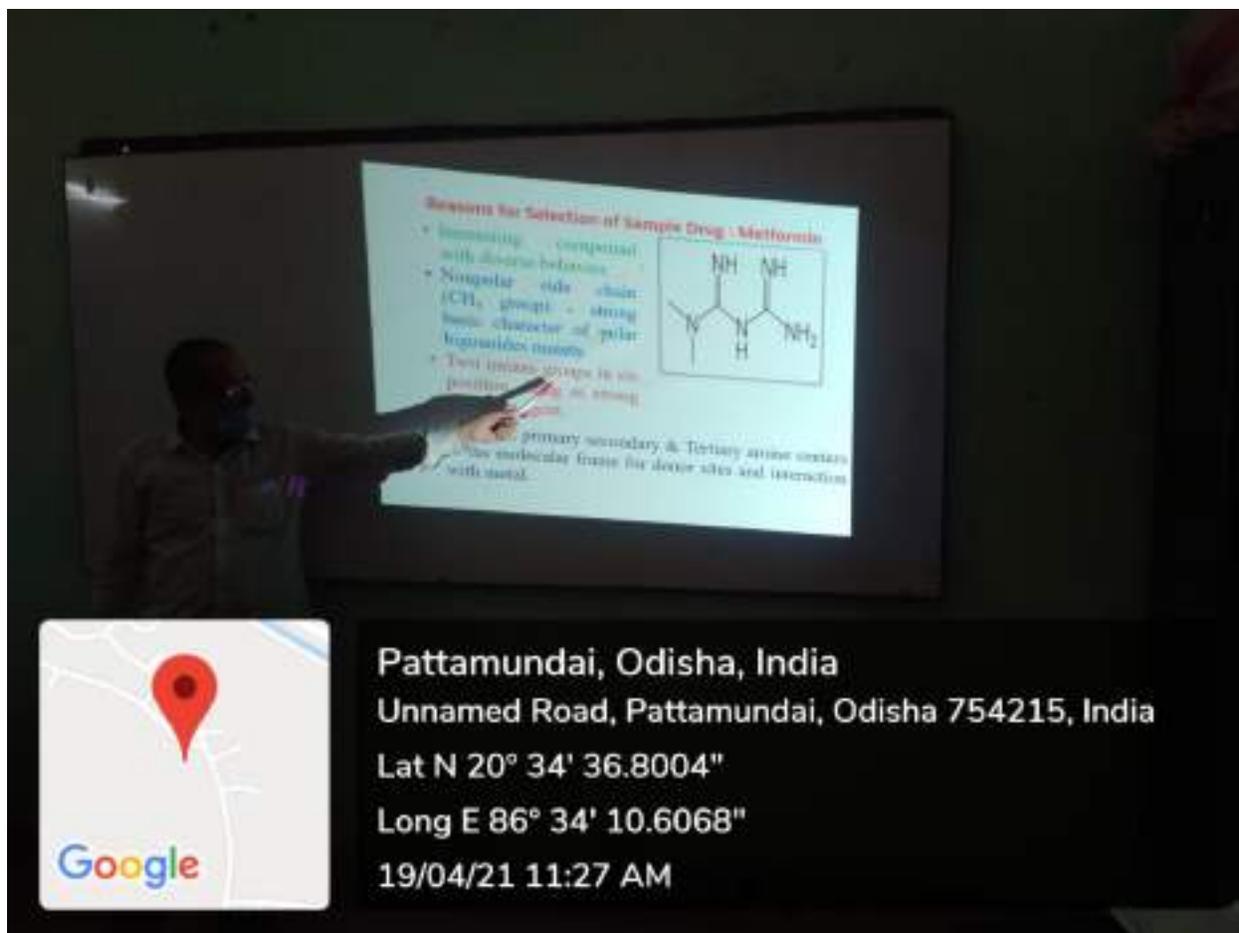

Therefore, Green Chemistry is a tool not only for reducing the negative impact of these processes aimed at improving efficiency, although clearly both impact assessment and process optimisation are fundamental and complementary objectives of the subject.

**Reasons for Selection of Sample Drug - Metformin**

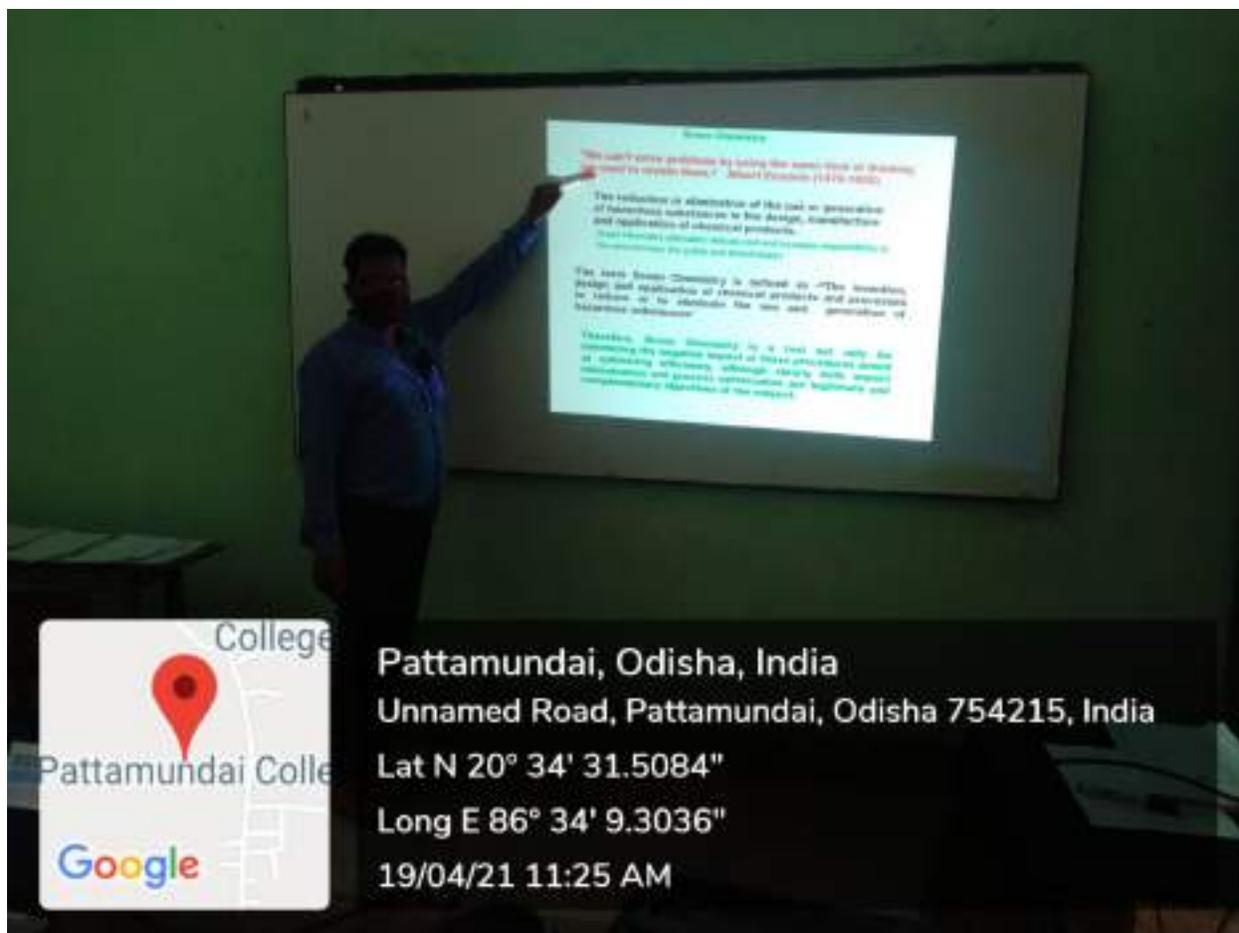

- Immunity - compared with diuretic relations
- Nonpolar side chain (CH<sub>2</sub> group) - strong basic character of polar lipophilic moiety
- Two imino groups in cis position - cis is strong
- primary secondary & Tertiary amine centers
- The molecular frame for donor sites and interaction with metal.

CN1C=NC2=C1C(=O)N(C)C2
