Green Chemistry

"We can't solve problems by using the same kind of thinking we used to create them." Albert Einstein (1879-1955)

The reduction or elimination of the use or generation of hazardous substances in the design, manufacture and application of chemical products.
Green Chemistry ultimately reduces cost and increases responsibility to the environment, the public and shareholders

The term Green Chemistry is defined as "The invention, design and application of chemical products and processes to reduce or to eliminate the use and generation of hazardous substances"

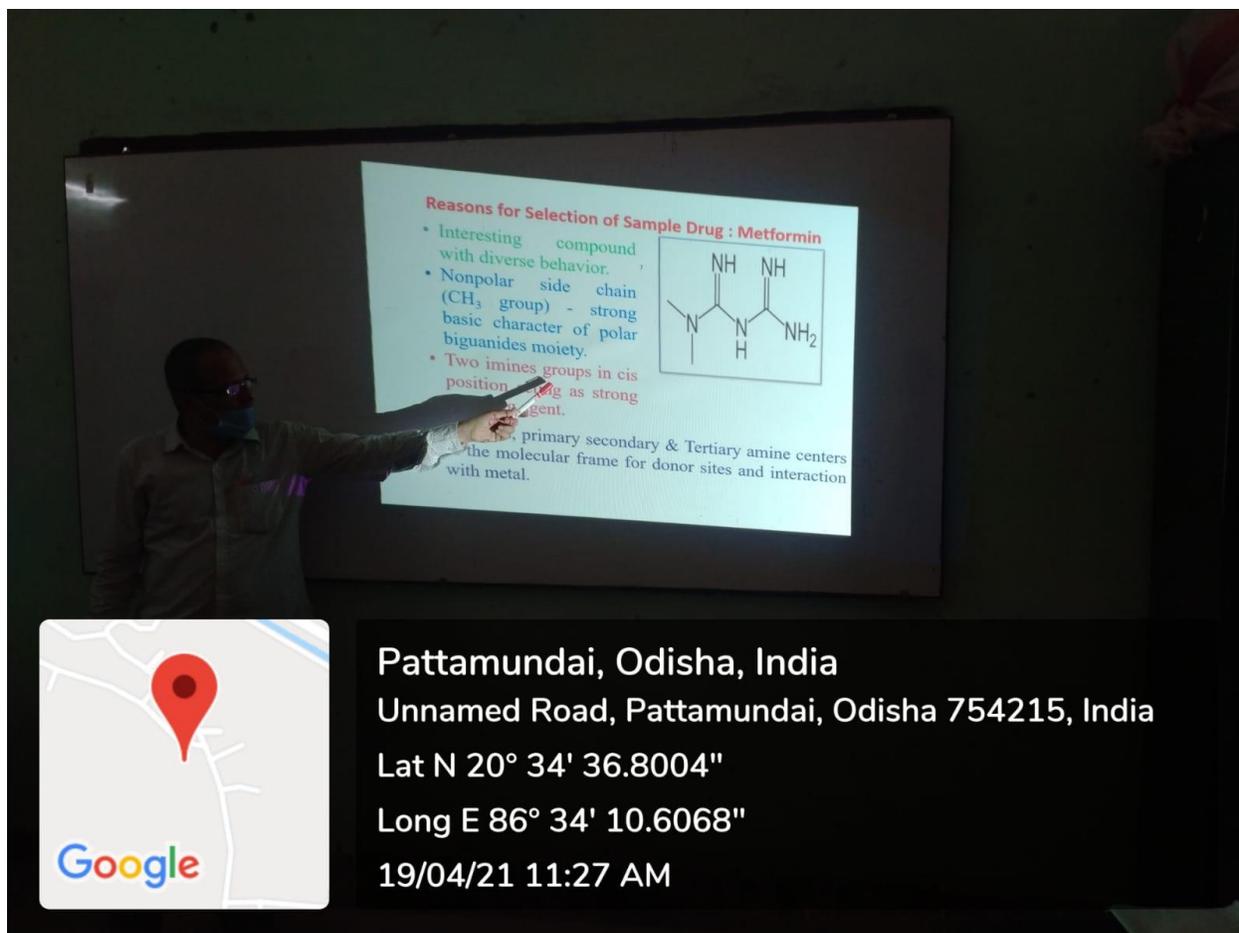

Therefore, Green Chemistry is a tool not only for minimizing the negative impact of those procedures aimed at optimizing efficiency, although clearly both impact minimization and process optimization are legitimate and complementary objectives of the subject.

Reasons for Selection of Sample Drug : Metformin

- Interesting compound with diverse behavior.
- Nonpolar side chain (CH₃ group) - strong basic character of polar biguanides moiety.
- Two imines groups in cis position act as strong ligand.

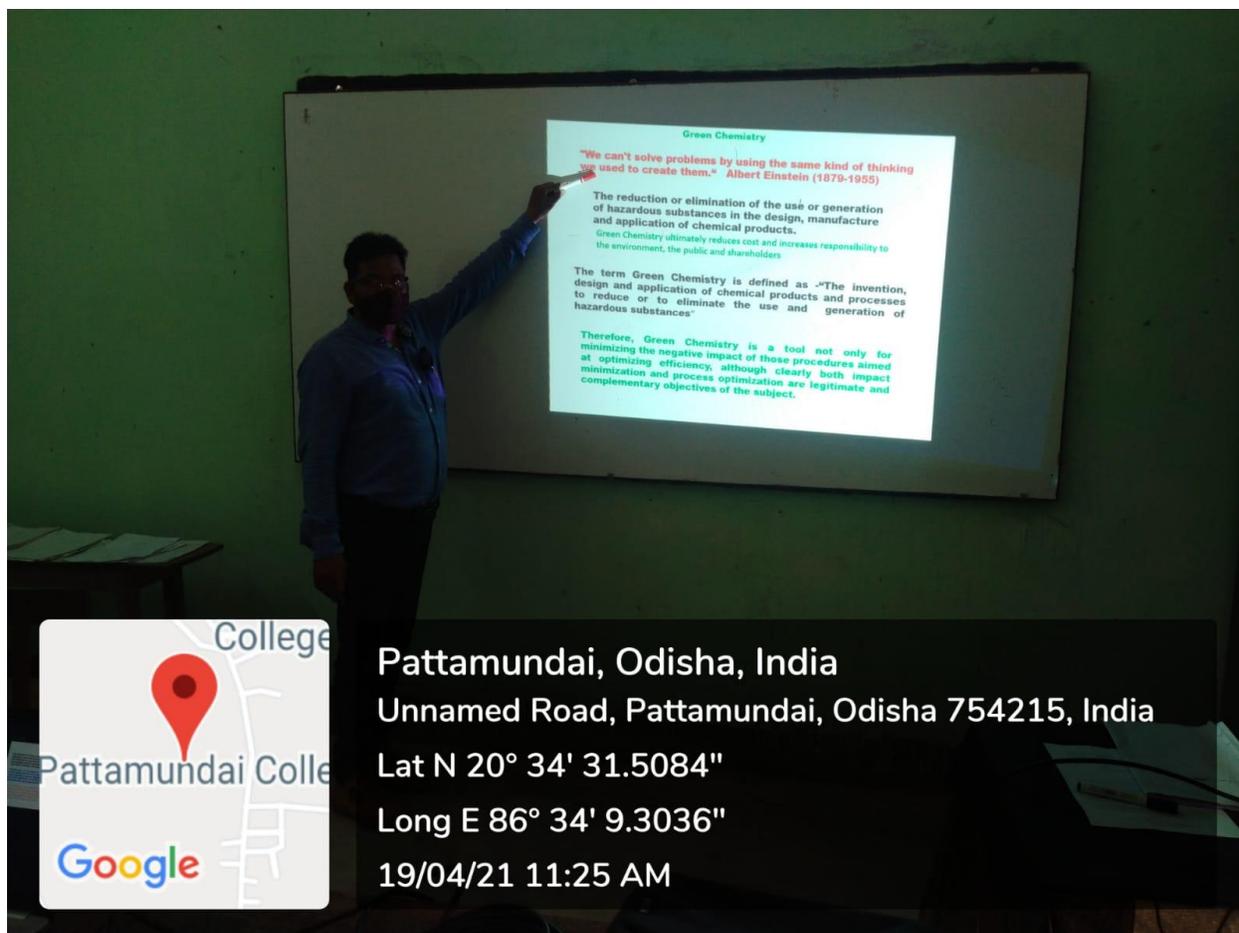

primary secondary & Tertiary amine centers in the molecular frame for donor sites and interaction with metal.

CN1C=NC(=N)N1
